Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1899 Excerpt: .upward. Contrary to the usual custom pursued in making relief maps, the vertical scale adopted is the same as that for horizontal distances. This means that the heights of the mountains and plateaus have not been exaggerated for pictorial effect, but retain in this respect their true proportion in reference to their bases. The elevations are built up with layers of prepared cardboard. Each layer is twelve onethousandths of an inch (0.012 inch) thick, and represents an increase of height above sea level of one thousand feet. Thus Mt. Washington, N. H., which is 6,000 feet high, requires, six layers, while Pikes Peak, 14,000 feet, and Mt. St. Elias, 18,000 feet, require fourteen and eighteen layers, respectively. The edges of these successive steps being left sharply cut and perpendicular, serve to mark the lines of equal elevation, and correspond to the contours of a topographical map. To assist the eye in obtaining a clearer view of the modelling of the mountain chains, the shadows have been imitated which they would cast with the sun low in the west. Lines of equal depth have been drawn in the Atlantic and Pacific oceans and the Gulf of Mexico, for intervals of 1,000 feet. The wide space between the shore and the first line indicates the position of the submerged portion of the continental plateau. Where they are closely grouped are found the steep inclines which lead to the ocean floor. At numerous points magnetic needles have been mounted,...
